Ballistic protection plate conforms to NIJ 0101.04 and NIJ 0101.06 standards.

Its polyethylene and ceramic design offers effective ballistic protection, all for a contained weight, while avoiding fragmentation of the warhead.

Fully configurable, it can be combined with NIJ IIIA soft ballistic protection (ICW) or used as sole ballistic protection (SA).

Its design favors the dispersion within the plate of the energy transferred by the projectile at the moment of impact.
