Ammunition designed for intensive training

This **5.56×45 mm FMJ BT** cartridge is ideal for sporting disciplines requiring rate of fire, reliability, and stability of fire. Its semi-bottomed bullet improves aerodynamics and trajectory, even at long ranges. The full jacket preserves the barrel's rifling while maintaining constant chamber pressure.

Stable performance in extreme conditions

Tested according to the **KIAG 6215** protocol, the cartridge maintains a stable velocity between -54 °C and +52 °C, with a deviation of less than 78 m/s. The mean corrected pressure (XCP) does not exceed 420 MPa, and the muzzle energy remains below 1500 J, thus providing predictable behavior even in the harshest environments.

- **Average velocity at 24 m:** 965 ± 12 m/s
- **Maximum energy at 24 m:** ? 1500 J
- **Standard deviation:** ? 12 m/s
- **Action time:** ? 3 ms
- **Accuracy at 183 m:** Mr ? 50.08 mm

Each cartridge is tested for its leaktightness (**less than 15% leaks accepted**) and its percussion reliability, according to the drop method (**H ± 5 SD test**).

Economical solution for large volumes

This 5,000-round pack is the perfect solution for clubs or gun shops looking to offer a reliable supply at a reasonable price. Ideal for long-term training or intensive outdoor shooting sessions.
