### For Mil-Spec receiver extension tubes

The Daniel Defense Adjustable Stock is constructed from a proprietary blend of glass-infused polymers and finished with a soft-touch rubber overmold in strategic locations. The new stock is precision formed for mil-spec receiver extensions to have very little forward or side-to-side play, which is so common in many other stocks. This eliminates the need for a tensioner or friction lock.

#### Technical characteristics:

- **Material** : High strength reinforced polymer
- **Compatibility** : Mil-Spec stock tubes
- **Adjustment Positions** : Multiple for personalized comfort
- **Attachment Points** : Integrated for QD slings
- **Weight** : Lightweight for better handling
- **Resistance** : Robust design for intensive use
- **Finish** : Textured surface for better grip

The result is a durable stock that gives the shooter a comfortable, repeatable cheek weld and unprecedented control of the firearm. The stock can be used with one of the two included buttpads or without any buttpads to customize the rifle to the operator's carry. The buttpads are available in two sizes: a thicker convex shape (0.8") and a thinner concave shape (0.5"), designed to prevent snagging while carrying the rifle. Limited-rotation QD attachment points are integrated on both sides of the stock for ambidextrous sling connection.
