Red Dot RMSC Compatible

Compact Optic-Ready pistol, designed for rapid aiming and training.

- **caliber:** 9x19mm
- **Slide:** 416 stainless steel (DLC finish)
- **Optic Ready plate:** RMSC compatible
- **carcass:** fiberglass reinforced polymer
- **magazines supplied:** 1 × 14 rounds, 1 × 16 rounds
- **rail:** rail under the carcass for lamp/laser
- **manufacturing:** Made in USA

The **MOSSBERG MC2C** is a compact pistol designed to offer instinctive handling and easy integration of an **RMSC-** format red dot sight. Its careful construction and modularity make it a good choice for clubs and gun shops looking for a compact weapon that performs well on the range.

Ergonomics and sensations

The **reinforced polymer** frame combines rigidity and lightness: the aggressive texture and indentations improve grip and confidence during sets. The marked comb facilitates hand positioning and stability when starting the shot.

Optic-Ready System

The machined plate for **RMSC** allows direct mounting of a micro-sight without an adapter: this guarantees a reproducible optical position and faster target acquisition, a tangible advantage on gong and silhouettes.

Safe disassembly and maintenance

The disassembly process requires the firing pin to be removed from the rear of the slide after extracting the locking plate, avoiding the need to pull the trigger. This sequence facilitates maintenance while reducing risks during handling at the gunsmithing bench.

Relaxation and control

The flat-profile trigger incorporates an active safety system; the optimized **starting weight** and **stroke** provide a reassuring start and a short reset that promotes regular series in the pit.

Finishing and handling

The **DLC** -treated 416 steel slide features front and rear ridges for a secure grip, even when wet. The treatment increases surface hardness and reduces residue adhesion, simplifying post-session cleanup.

RMSC

The **RMSC** format is a standardized footprint for compact micro-sights. Its practical advantage is that it allows direct and reproducible mounting of a red dot, without the need for an adapter, which saves weight and reduces mounting height.

DLC (Diamond-Like Carbon)

DLC is a hard, smooth coating applied to the slide; it increases wear resistance and reduces the adhesion of deposits. In practical terms, this results in smoother sliding and easier maintenance.

Reinforced polymer

The term **reinforced polymer** refers to an injected composite filled with fibers that maintains an excellent strength-to-weight ratio. For the user, this means a weapon that is lightweight, impact-resistant, and less prone to corrosion than some steels.

- **trigger start weight:** 2.5 kg
- **trigger travel:** 13 mm
- **Optical compatibility:** Red Dot RMSC format (direct mount)
- **zipper finishes:** black DLC, front/rear grooves
