YDB9-14	DB9 firing pin spring retainer	Vente libre	-

Ensure the firing pin spring is securely held on your Diamondback DB9 with this high-precision retainer, essential for proper firing pin operation.

The **FP Spring Retainer** is a key component of the **Diamondback DB9** 's firing pin assembly. It holds the firing pin spring in position, providing the necessary tension to return the firing pin after each shot. Machined to fit snugly into the slide housing, it prevents spring movement or weakening.

- **Compatibility** : Diamondback DB9 (9 mm)
- **Function** : Holds the firing pin spring in position
- **Position** : At the rear of the firing pin block, in the slide
- **Material** : Steel or high-density polymer (depending on version)
- **Treatment** : Anti-wear / anti-corrosion
- **Mounting** : Direct insertion, locking without special tools
- **Standards** : Diamondback OEM Specifications

Role of the FP Spring Retainer

This component keeps the compressed firing pin spring in line, preventing any movement during the firing cycle. It allows for smooth compression, proper firing pin reset, and prevents the spring from disengaging or twisting under recoil.

Materials and processing

Depending on the version, it is available in **hardened steel** for maximum durability or in reinforced **technical polymer** , which is lighter but just as reliable. Each part is precisely cast or machined to avoid any play or unwanted friction.

Compatibility and maintenance

100% compatible with all generations of **Diamondback DB9** . Its replacement is recommended every time the **firing pin** or **firing pin spring** is worked on, and systematically in case of doubt about the position being maintained.
