A retro-designed AR15 pack with fixed sights and a quad-picatinny rail

Balanced pack combining TAN aesthetics and tactical components.

- **caliber:** .223 Remington
- **barrel length:** 14.5"
- **handguard:** 12" Picatinny quad-rail
- **cases:** forged alloy
- **stock:** CCS telescopic
- **optics included:** FALKE LE QL Gen 2
- **magazine supplied:** 1 × 30 shots HERA H3T
- **delivery:** complete pack with tan and black accessories

The **HERA ARMS Quadrirail 14.5" PACK** offers a ready-to-use .223 Rem rifle for training and reactive target shooting, with a TAN aesthetic that facilitates customization. The quad-rail ensures interface rigidity and the included accessory set (optics, foregrip, rail protectors, stock and grips) allows the rifle to be configured to suit the shooter.

Ergonomics and feel

The **telescopic CCS** stock offers multiple support positions to adapt to body shape and shooting style. The combination of an ergonomic pistol grip and a short vertical foregrip promotes a firm grip and a noticeable reduction in exit travel, appreciated during quick sequences at the range.

Sight and optics

The **FALKE LE QL Gen 2** is a compact red dot sight designed for instant visual acquisition: a wide reticle for fast aiming and a fine dot for precision. Its quick-release Picatinny mount and automatic shutoff function with motion sensor facilitate extended use and battery management.

Modularity and fixation

The **Picatinny quad-rail** system provides a standardized interface for mounting sights, grips, and accessories. Its rigidity ensures precise zeroing, while the included rail covers protect unused interfaces and improve grip comfort.

Materials and finish

Forged housings provide a solid mechanical foundation and increased durability. Reinforced polymer components (stock, grips) reduce weight while maintaining high mechanical strength, for a comfortable balance between handling and robustness.

Quad-rail Picatinny

The **Picatinny quad rail** is a standardized rail platform for precisely positioning accessories and sights. Its concrete advantage: repeatable mounting and extensive compatibility with a wide range of standard accessories.

Telescopic CCS

The **CCS telescopic stock** combines length adjustments and QD sling points, facilitating rapid adjustment to body shape and attachment point installation. It improves shoulder comfort and stability during long series.

Killflash / anti-reflective filter

A killflash is a grid or filter that mounts on the optics to reduce glare and protect the lens. It maintains visual stealth and protects the optical surface without impairing aiming under normal operating conditions.

- **flash suppressor:** type A2
- **handguard length:** 12" quad-rail Picatinny
- **reticle size (FALKE):** 65 MOA circle / 2 MOA dot
- **optical autonomy:** 100–1000 h (up to 4000 h in standby)
- **optical weight:** 271 g
- **rail covers:** 2 × 15 cm pre-segmented
- **vertical handle:** compact, internal battery storage
- **selector kit:** >25 configurations
