The STF/12 XL RANGE is FABARM's solution for anti-drone combat.

Its manual pump reloading system offers reliability of use, but also compatibility with specific ammunition whose projectile speed and permitted pressures are very low.

Its 22" barrel using TRIBORE HP technology creates a venturi effect at the moment of firing, thus increasing the velocity of the projectile at the muzzle and consequently the range of the ammunition as well as the penetration on impact.

Equipped with sighting devices called QTA (Quick target acquisition), the STF/12 offers intuitive and rapid aiming, allowing you to anticipate the course of a drone.

For added versatility, the rear sight, mounted on a Picatinny rail, can easily be removed to make room for an electronic sight.

The XL RANGE is also equipped with a folding stock, in order to limit the size of the weapon during movement or transport, thus offering a total length of 81 cm when folded.

Sale only to Administrations and security companies justifying the necessary authorizations for the acquisition.
